

# Hello World e4 Application – Part 12

## Creating and Opening a Wizard

### Adding Actions to the Eclipse Main ToolBar

This section teaches how to add an Action to a Eclipse's Main ToolBar similar to ActionSets extnpt.

This is similar to Commands and Handlers. This assumes that you already have created a Command

1. Open Application.e4xmi and select TrimBars under Trimmed Window
2. Right Click and select Add Child > Window Trim

3. Provide a Name and ID for the newly created Window Trim
4. Right Click on the Window Trim > Add Child > ToolBar
  - Assign ID and Name

5. Right Click on the newly Added ToolBar and create a HandledMenuItem
  - a. In Command Attribute select your Exit Command using the Find Button
  - b. Provide a Label "Exit"
6. Now Run your application and You will find the following output
