Hello World e4 Application – Part 3
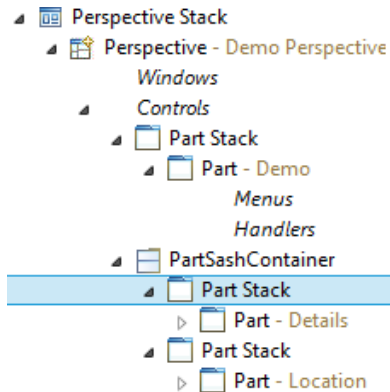

Adding & Layouting Parts to the Application

Adding Multiple Views and Layouting the Perspective

1. Open Application.e4xmi and selected Trimmed Window that is already created under Windows
2. Expand Trimmed Windows > Controls > Perspective Stack > Perspective.
3. Expand the Perspective and again Right Click on Controls to add Part SashContainer.
   To the PartSashContainer, add 2 Part Stack
   To each of the Part Stack add a Part and provide respective Parts with Class URI

4. To provide the Class URI, we need to 1st create the View Class as seen in the previous tutorial.
   View Class can also be created using Window Builder.

5. Assign the Class URI.
6. Open your Run Configuration and click on Add Required plugins, Apply, Run.
7. You should now get your View inside the Window
